Nowadays, Sechenov University is the major medical educational and scientific institution in Russia aimed at training, certification and postgraduate studies of physicians and pharmacists promoting thus further advance of medical science and healthcare domestically and on a global scale.

Over 2,500 of academic headcount at 8 faculties encompassing 150 chairs implement training in 14 specialties covering more than 14,000 students and about 15,000 postgraduates practicing full-time, part-time and evening attendance, as well as extramural educational solutions. Hundreds of higher degree theses are defended annually. 85% of the University tutors have higher degrees. The staff includes 4 fellows and 3 corresponding members of the Russian Academy of Sciences, 64 fellows and 38 corresponding members of the Russian Academy of Medical Sciences (RAMS), 3 fellows and 1 corresponding member of the Russian Academy of Education, about 70 Honored Scientists of the Russian Federation and over 100 State Prize winners.
The University incorporates 69 educational venues, 19 hospitals with over 3,000 beds, 7 research institutes and 5 RAMS R&D units, more than 30 laboratories, the greatest medical library in Europe, botanic garden, and many other facilities ensuring academic excellence resulting in powerful research and innovation advances along with cutting-edge medical care practices.

Since 2010 the Sechenov University has been headed by Prof. Petr V. Glybochko, MD, Corresponding Member of the RAMS, Member of the European Association of Urology, Vice-President of the Russian Association of Urologists, Chairman of the Education and Methodics Association of Medical and Pharmaceutical HEIs, owning 17 patents, the author of over 450 scientific studies, etc.
Education And Study in University

With its more than 250-year history First MSMU (1 Med) is the oldest Russian medical educational institution providing training in full range of specialties related to medicine and healthcare.

First MSMU offers to international students both degree and postgraduate programmes in General Medicine, Pharmacy and Stomatology (Dentistry). All proprietary courses are catered by the University's licensed faculty (about 90% of lecturers have postgraduate degrees) at up-to-date training facilities, including teaching hospitals and pharmaceutical labs.
In 2015 I. M. Sechenov First Moscow State Medical University entered the all-Russian academic excellence project aimed at enhancing competitiveness of leading Russian universities among the global research and education centres. Project 5-100 is the initiative to promote at least five Russian universities into the top 100 of the world's best institutions of higher education.

First MSMU is the only industry-specific university granted the right to participate in this program, which arouses beside the natural pride the feeling of particular responsibility for the future reputation of the flagship of Russian medical education and the king-size R&D complex. More than two centuries of history and broad international fame makes us sure that First MSMU is quite able to keep pace with the period preserving its glorious academic tradition.

Excellence Initiatives, similar to the Russian Project 5-100, are the matter of concern for many national governments worldwide. The upgrade positions in world rankings for domestic universities is not the only benefit. Higher education institutions with excellent academic reputation are much desirable for talented students, gifted faculty and researchers, demanded by major companies as partners, the graduates of such universities enjoy considerable competitive advantage in employment. Ultimately, such programs improve the overall grade of the educational system and scientific research output, which are the long-term performance indicators of the national economy as a whole.

In pursuance of the 5-100 goals, the four STRATEGIC ACADEMIC UNITS* (StrAUs) are being established within FMSMU to facilitate its advance – at first as a part of the program, and then in the global academic rankings.
The Faculty of Medicine is the oldest and largest faculty in the University. Today it is comprised of 45 chairs, teaching hospitals, and research laboratories. The Faculty of Medicine provides undergraduate education in General Medicine. Graduates receive the degree of Medical Doctor. It is granted to medical students after the completion of their degree program, which lasts 6 years for full-time studies or 7 years in case of part-time studies. About 600 students graduate each year.

The Faculty of Medicine also provides postgraduate training. Depending on the branch of medicine, this can be a 1-year internship, 2-3-year residency or a combination of both. Some chairs also offer PhD fellowships, with the PhD program lasting 3-4 years, as well as other doctoral programs.

The faculty is headed by the Dean Prof. Marina A. Kinkulkina, M.D. Chairs are headed by professors, academicians and corresponding members of Russian Academies of Sciences, Medical Sciences, Natural Sciences, and Education. Most faculty members have PhD or Doctor of Medicine research degrees.
The Central Scientific Medical Library of I.M. Sechenov First MSMU dates back to 1919 when the first small sets of books were received. Over the years the Library has evolved into the one of the biggest European centers of scientific medical data. Nowadays the Library has at its disposal a unique collection of scientific publications in medicine and healthcare and one of the Russia’s best Centers of Library Information Technologies Development and Introduction.

The Library is a member of the International Federation of Library Associations and Institutions (IFLA) and takes part in the international exchange of library materials. The Library numbers more than 3 million items (more than 1,5 million titles) of Russian and foreign medical books and journals, including scientific works, translations, theses, abstracts, deposit manuscripts, etc. Annually the Library is visited by up to 120,000 specialists from Russia, CIS and far-abroad countries at whose disposal there are 5000 m² of archives, comfortable reading rooms with over 400 places and modern IT service for users. Annual circulation exceeds 400,000. Since 1988 the Library has been maintaining the database of medicine and healthcare “Russian Medicine” that comprises over 80% of all published and unpublished materials in the field.
